PROFESSIONAL SUMMARY

IT professional with hands-on experience in systems administration, identity and access management, cloud infrastructure, and AI-enabled tooling across government, corporate, and higher-education environments. Adept at managing large-scale user environments, resolving complex technical issues, and deploying data-driven solutions that reduce manual overhead and improve operational efficiency.

EDUCATION

University of The District of Columbia
Bachelor of Science in Information Technology.

Washington, DC
05/2025

EXPERIENCE

Information Technology Analyst 08/2025 – Present
Office of the Chief Technology Officer Washington, DC

- Manage and configure user accounts, group policies, and permissions across 50+ DC Government OUs, ensuring secure identity governance and adherence to access-control standards.
- Execute secure password resets and identity verification using elevated administrative privileges, improving authentication accuracy and reducing access-related incidents.
- Diagnose and resolve complex hardware issues for laptops, desktops, mobile devices, and peripherals, restoring functionality and minimizing end-user downtime.
- Create, track, and resolve service requests in ServiceNow, applying proper categorization and escalation methods to meet agency SLA targets.
- Document technical issues and resolutions to support accurate tier-escalation, knowledge sharing, and data quality improvement.

Consultant 11/2024 – Present
GESK LLC Washington, DC

- Developed an AI Enablement Strategy for a Top 100 biotechnology company, building AI agents and avatars as proof of concept using Tavus, delivering multiple policy documents, and providing guidance on AI-powered humanoid robot initiatives.

Smartsheet Professional Services Intern 05/2025 – 08/2025
Ellucian Reston, VA

- Reduced template-change turnaround from 10 days to 48 hours for a 120-PM global delivery organization by building an Innovation Hub in Smartsheet with an intake form, automated triage dashboards, and real-time status widgets, capturing 120+ enhancement ideas in the first quarter.
- Eliminated manual scheduling and email overhead by designing automated, data-driven workspaces that generated task lists, owner reminders, and live project status reporting for every active engagement.
- Reduced duplicate change requests by 40% by centralizing project documentation in a Confluence knowledge base, ensuring consistent data accuracy and on-schedule rollout of all template updates.

Digital Innovation Associate 09/2023 – 09/2024
United Therapeutics Corporation Silver Spring, MD

- Developed and maintained Power BI dashboards reporting on sprint project performance for the VP of Innovations, sourcing and transforming data from Excel to deliver executive-level visibility into delivery timelines and team output.
- Configured Microsoft Dynamics CRM components including forms and automated workflows for the marketing department, improving data capture consistency and reducing manual handoffs.
- Collaborated directly with Google Cloud and Microsoft engineers to architect and deploy AI-powered MVPs and POCs, serving as the primary liaison managing deliverables, timelines, and technical integration across teams.
- Reduced research group inquiry response time by 80% by implementing a RAG model using Azure AI Studio, integrating Python, Gemini, Gradio, and MedLM in a Google Cloud environment.
- Automated data workflows and built internal tools using Python scripting, including AI-based MVPs and dataset processing for cross-functional stakeholders.
- Improved employee productivity by 60% by training 50+ employees on Copilot for M365 and Azure AI Studio, driving AI adoption across departments.

Web/Systems Administrator 06/2021 – Present
Montgomery College Silver Spring, MD

- Increased user engagement by 24% and reduced event-related inquiries by 56% within 9 months by leading a full website revamp, improving information accuracy, accessibility compliance, and overall site architecture.
- Strengthened platform security and ensured compliance with college standards by implementing new security measures and accessibility features in collaboration with the Web Master.

- Improved project tracking and stakeholder communication by managing website development workflows in Smartsheet, documenting processes and best practices to support future team efficiency.

PROJECTS

RAG Proof of Concept

06/2024 – 08/2024

Business Lead, United Therapeutics Corp

- Coordinated deliverables between Google Cloud engineers and company scientists to build a low-fidelity prototype of a custom RAG interface using Gemini, Gradio, Python, and MedLM in the Google Cloud environment.

Homelab Infrastructure & Data Operations

PostgreSQL, MySQL, SQLite, Python, SFTP

- Self-host and administer a multi-service environment running on PostgreSQL, MySQL, and SQLite databases, managing containerized applications including NocoDB, Paperless, Bitwarden, and Nginx Proxy Manager across a local network.
- Engineered an automated Python script to encrypt and transfer backup data to an external destination via SFTP, ensuring secure, scheduled data transfer aligned with data protection best practices.
- Managed database performance, service uptime, and data integrity across all self-hosted platforms, simulating real-world database administration responsibilities including monitoring, recovery, and access control.

Personal Database Management System

MySQL, Python

- Designed and deployed a relational MySQL database to catalog and track a personal media library, implementing multiple tables with defined relationships, foreign keys, and query optimization to support fast, accurate data retrieval.
- Built a Python-based frontend interface to interact with the database, enabling structured data entry, search, and reporting, demonstrating end-to-end data solution development from schema design to user-facing output.

Apartment Inventory Tracking System

MySQL, SQL

- Developed and actively maintain a SQL-based inventory database with multiple structured views to organize and query household assets, performing regular updates and ad-hoc queries to ensure ongoing data accuracy.

SKILLS

Cloud & Infrastructure: Microsoft Azure, Google Cloud Platform, Docker, Nginx Proxy Manager

Databases & Administration: MySQL, PostgreSQL, SQLite, Microsoft SQL Server, NocoDB, Database Design, Schema Management

Languages & Scripting: Python, SQL, Java, C++, Bash

Platforms & Tools: Microsoft 365, ServiceNow, Smartsheet, Asana, Confluence, SharePoint, AD Manage 360

CRM & Integrations: Microsoft Dynamics CRM, Dynamics automation tools, Microsoft Entra, Cayosoft

Data & Reporting: Power BI, SQL scripting, Data imports/exports, SFTP and data transfer protocols, Excel

CERTIFICATIONS

- CompTIA Security+ ce (SY0-701), exp. 2026
- Cisco Certified Networking Associate: Introduction to Networks (2023)
- Network Defense and Countermeasures: Network Defense and Ethical Hacking (2024)
- Agile Methodology Virtual Experience Program (2023)
- Asana Workflow Specialist Certificate (2025)
